Water reducing Additive for concrete products

Water reducing Additive for concrete products is a ready-to-use liquid superplasticizer. It is light yellow in appearance. Besides, it can be completely water easily. The water reduction efficiency of pce concrete admixture can be up to 30%. It is mainly used in the ready-mixed and precast concrete industries where the highest durability and performance is required.

Uses

To obtain a high quality concrete mix with accelerated strength development and extended workability without delayed setting characteristics.

To provide a concrete mix with exceptional placing characteristics and accelerated cement hydration for early strength development and high quality concrete.

To provide improved durability by increasing ultimate strengths and reducing concrete permeability.

Typical Applications & Advantages

- | |
|---|
| 1. Provides high quality durable concrete. |
| 2. Powerful plasticizing action with an improved initial workability, easier placing and faster strength development. |
| 3. Reduce water cement ratio to the maximum which allows production of high strength concrete. |
| 4. Capability of delivering high performance concrete at any time to the job site in place. |
| 5. Water reducing Additive for concrete products can be either used alone or after compounded with other additives to make special concrete such as pumping concrete, ready mixed concrete etc. |

Fields of Application

- | |
|--|
| *Cement based and gypsum based self-leveling mortar. |
| *Grouts, special early strength mortar, repair mortar, grouting agent, grouting materials etc. |
| *Water-proofing materials, refractory materials. |
